ECOMMERCE & MARKETPLACE OPERATIONS

Corinna Helm

Amazon Seller Central & Vendor Central | Walmart | Shopify

14+ years Ecommerce & digital operations	**Marketplace ownership** Catalog, account health, launches	**Analytical execution** Inventory, media, forecasting, QA

SELECTED WORK

- **Listing optimization & merchandising** - shopper clarity, image planning, structured attributes and measurement.
- **Multichannel launch ownership** - Amazon, Walmart and Shopify deliverables, contractors, dependencies and QA gates.
- **DigitalOpsDesk FBA Restock Planner** - independent inventory-planning system with forecasting, shipment logic and automation.
- **Performance & forecasting** - traffic vs. conversion diagnosis, PPC efficiency, revenue forecasting and inventory risk.
- **Catalog & account health** - suppression investigation, Seller Support follow-through, remediation tracking and preventive QA.
- **Budget pacing & agency coordination** - projected spend, remaining allocation, ACOS/ROAS and business constraints.
- **Competitive ASIN audit** - normalized value, PDP quality, variation structure, catalog attributes and Seller Central investigation.

How I approach the work: start with accurate product information, make the next action and owner clear, resolve blockers early, verify the live result, and use performance data to decide what needs attention next.

Portfolio note. Client confidentiality is protected throughout. Public samples use fictional brands, synthetic data, sanitized workflows, independent-project documentation, or clearly labeled public-marketplace observations.

01 / LISTING OPTIMIZATION & MERCHANDISING

Make the value obvious before asking the shopper to work for it

A fictional party-supply listing shows how I move from weak, keyword-heavy copy to a clearer shopper experience and a practical launch/measurement plan.

BEFORE	PROPOSED
Space Party Birthday Decorations Supplies Set Plates Cups Party Kit Best Quality for Birthday Parties Problems: repetitive terms, unsupported quality claim, unclear guest count and missing specifics.	**Celebration Studio Space Birthday Party Supplies for 16 Guests - 67-Piece Set with Plates, Napkins, Cups and Tablecloths** Lead with what the product is, how many people it serves and what is included.

CONTENT & CREATIVE PLAN

- **Contents clarity:** state the dinner plates, dessert plates, napkins, cups, tablecloths and exclusions so the piece count is meaningful.
- **Image jobs:** main image = bundle clarity; contents image = quantities; dimensions image = fit; lifestyle/A+ = context and education.
- **Catalog QA:** verify variation setup, required attributes, quantities, materials and approved source-of-truth specifications before publishing.
- **Live-page verification:** check desktop/mobile display, offer, inventory and delivery promise after release.

Measurement approach: establish a baseline and monitor sessions, click-through data where available, unit-session percentage, returns and customer questions. Note concurrent changes in price, promotions, advertising and availability before attributing performance to a content edit.

Skills: Amazon catalog operations | Listing copy | Image briefs | Structured attributes | Variations | QA | Conversion thinking

02 / MULTICHANNEL LAUNCH & CONTRACTOR MANAGEMENT

Delegation is not hand-off

I use a source-of-truth tracker to keep Amazon, Walmart and Shopify deliverables moving when work depends on VAs, designers, web contractors, suppliers and internal owners.

	A	B	C	D	E	F	G	H
1	**Product launch coordination**							
2	FICTIONAL DEMO | Owners, products, dates and status are illustrative. Blue text = editable inputs.							
3								
4								
5	**SKU**	**Deliverable**	**Owner**	**Due date**	**Work status**	**Dependency / blocker**	**QA status**	**Release gate**
6	SPACE-16	Product copy	Content VA	2026-10-05	Complete	None	Passed	Ready
7	SPACE-16	Image set	Design contractor	2026-10-06	In Progress	Confirm cup dimensions	Pending	Hold
8	SPACE-16	A+ content	Content VA	2026-10-07	Not Started	Approved images	Pending	Hold
9	DINO-16	Variation setup	Catalog specialist	2026-10-05	Complete	None	Failed	Hold
10	OCEAN-16	Live-page check	Ecommerce owner	2026-10-08	Complete	None	Passed	Ready
11								
12	Daily review: confirm next deliverable with each owner, resolve blockers, then check completed work against the brief. A completed task still needs QA.							
13								
14	Example action: ask the supplier to confirm cup dimensions; return the failed variation setup for correction. Launch only after every required component passes.							

- **Owner + due date + blocker:** every deliverable has a responsible person and a visible dependency.
- **QA is separate from completion:** a task can be marked complete and still remain on hold if it fails review.
- **Channel-specific execution:** Amazon variations/attributes, Walmart taxonomy/item setup, and Shopify PDP/mobile/checkout checks require different QA.
- **Follow-through:** if work stalls, identify whether the blocker is missing information, unclear instructions or competing priorities, then resolve it rather than letting the project sit.

> **Working rule: launch only when required deliverables are complete, QA has passed, dependencies are resolved, and the live result has been verified.**

Skills: Contractor / VA management | Cross-functional coordination | Amazon | Walmart | Shopify | Launch readiness | QA gates | Dependency management

03 / INDEPENDENT PROJECT - DIGITALOPSDESK

Amazon FBA Restock Planner

I designed a reusable replenishment system that turns Amazon inventory data into shipment recommendations, risk flags, reorder timing and a documented operating workflow.

DIGITALOPSDESK
Real tools. Real results. No fluff.

FBA Restock Planner
Quick-Start Guide — Your First 5 Minutes

VERSION 3.0

Welcome! This guide gets you from download to your first shipment recommendation in under 5 minutes.
The planner is pre-loaded with demo data — you can see it working before touching a single cell.

→ THE 7-STEP WORKFLOW

1. **STEP 1 → Download Amazon Report**
   Seller Central → Reports → Fulfillment → Inventory → FBA Inventory Replenishment Report → Download CSV
2. **STEP 2 → Paste Your Data**
   Open the CSV → Select All (Ctrl+A) → Copy → In the planner go to Paste_Amazon_Report tab → Click A6 → Paste
3. **STEP 3 → Configure Your Products**
   In Product_Setup, add Case Pack, Status, Cost, Selling Price, and Supplier for each SKU you sell
4. **STEP 4 → Check Settings**
   In Settings, verify Target Coverage Days, Lead Time, Buffer, and Growth Multiplier. Update if needed.
5. **STEP 5 → Add Promo Events**
   In Promo_Calendar, set Active = Yes for Prime Day, BFCM, or any upcoming demand spike
6. **STEP 6 → Read the Dashboard**
   Dashboard shows KPI cards at top. Red = urgent reorder. Yellow = watch. Green = healthy.
7. **STEP 7 → Export Your Shipment**
   Go to Shipment_Export — all SKUs with recommended quantities appear ready to copy into Amazon

COLOR GUIDE — What Each Color Means

- **GREEN cells** — Your input — fill these in
- **GRAY cells** — Formula calculated — do not edit
- **TEAL cells** — Auto-pulled from your Amazon paste
- **DARK cells** — Calculated output — read only

RISK LEVELS — What They Mean

URGENT	Days Cover < Lead Time. May already be too late — order immediately.
WATCH	Days Cover < Target Coverage. Order soon to avoid stockout.
HEALTHY	Days Cover ≥ Target Coverage. No action needed right now.
HOLD	Status = Hold in Product_Setup. Excluded from all calculations.

DigitalOpsDesk FBA Restock Planner • Quick-Start Guide • etsy.com/shop/DigitalOpsDesk Page 1

WHAT THE SYSTEM HANDLES

- Amazon replenishment-report intake
- Product setup: case packs, supplier, cost, price and lead-time overrides
- Multiple sales-velocity methods plus growth assumptions
- Prime Day/BFCM/custom promotional uplift
- Days of cover, forecast demand, reorder-by date and expected arrival
- Case-pack rounding and Amazon capacity limits
- Urgent / Watch / Healthy / Hold prioritization
- Dashboard + shipment-ready output
- Optional Apps Script for sorting, alerts, CSV export, refresh and backup

WHY IT MATTERS

This project shows more than spreadsheet skill. It demonstrates product thinking, operational judgment, user documentation, QA and the ability to turn recurring ecommerce decisions into a usable system.

IP note: the full working source workbook is intentionally not included in the public portfolio. Documentation and visual previews demonstrate the workflow without giving away the product.

Skills: Amazon FBA | Inventory forecasting | Replenishment | Workflow design | Excel / Google Sheets | Apps Script | Documentation | Process improvement

Diagnose before changing

I connect revenue, advertising and inventory signals so reporting ends with a specific business action instead of a dashboard for its own sake.

Marketplace Performance & Forecasting

Synthetic case study | Diagnose traffic, conversion, media and inventory together before changing tactics

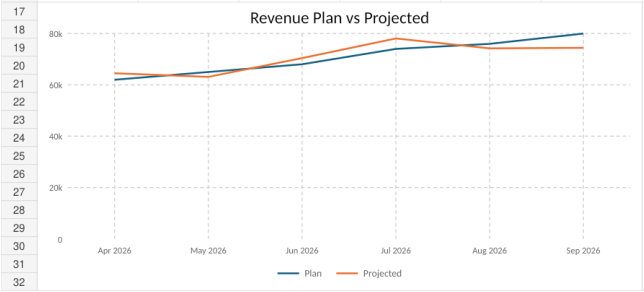

Six-Month Plan	Projected Revenue	Forecast vs Plan	Weighted ACOS
$425,000	$424,700	-0.1%	25.0%

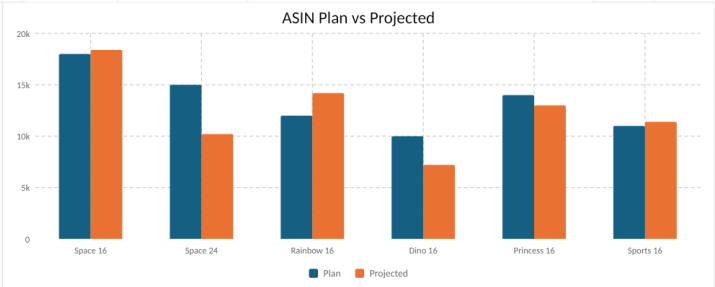

Monthly Revenue - Plan vs Projected

Month	Plan	Projected
Apr 2026	$62,000	$64,500
May 2026	$65,000	$63,100
Jun 2026	$68,000	$70,400
Jul 2026	$74,000	$78,100
Aug 2026	$76,000	$74,200
Sep 2026	$80,000	$74,400

Priority Actions

ASIN	Signal	Action
B0DEMO002	Conversion weak	Review value proposition, image, variation ladder and offer
B0DEMO003	21 days cover	Protect inventory before scaling demand
B0DEMO004	Low CTR	Audit keyword relevance and search presentation
B0DEMO006	26 days cover	Confirm replenishment timing; maintain efficient spend
B0DEMO001	On plan	Maintain; monitor inventory and margin

Traffic / click	Low sessions or CTR	Search visibility, keyword relevance, media coverage and search presentation
Conversion	Traffic present; CVR weak	Price, offer, delivery, images, content, reviews and variation structure
Inventory / pacing	Demand healthy; days cover or spend creates risk	Protect availability, confirm inbound and align media with margin and supply

The supporting workbook now includes a six-month plan vs. forecast, product-level diagnostics, ACOS/TACOS, days-cover risk, channel budget pacing and prioritized actions. Forecasting is useful only when it changes the next decision.

Skills: Marketplace analytics | PPC | ACOS / TACOS / ROAS | Forecasting | Conversion analysis | Budget pacing | Inventory risk | Action prioritization

05 / CATALOG & ACCOUNT HEALTH

Keep the issue open until the live result is verified

A fictional remediation tracker demonstrates the workflow I use for listing suppressions, attribute defects, variation problems and related-catalog risk.

Issue	Risk	Owner	Status	Next action / close criteria
Image-policy suppression	High	Marketplace Ops	Fix in progress	Replace image; close only when listing is active and compliant asset is live
Required attribute missing	Medium	Content VA	Needs review	Validate source spec; update field; confirm backend and browse behavior
Related-ASIN image risk	High	Designer	Preventive review	Audit sibling listings before the same issue creates more suppressions
Variation child detached	High	Marketplace Ops	Case open	Provide evidence; follow Seller Support until child is visible under correct parent
Inaccurate material field	Medium	Content VA	Queued	Confirm source-of-truth product spec; correct structured attribute

REMEDIATION WORKFLOW

- **Confirm:** identify the exact marketplace/policy issue and separate evidence from assumptions.
- **Expand:** review sibling listings for the same root cause so one suppression becomes a preventive catalog audit.
- **Own:** track owner, case/evidence, status, due date and next action.
- **Verify:** confirm the listing, attribute, variation or offer is actually corrected on the live page.
- **Prevent:** add the failure mode to future QA checklists and SOPs.

> **Seller Support case opened ≠ problem solved. I keep the work active until there is a verified catalog outcome.**

Skills: Amazon Account Health | Suppressions | Seller Support | Root-cause analysis | Catalog QA | Risk prioritization | Remediation tracking

06 / BUDGET PACING & AGENCY COORDINATION

Turn reporting into the next conversation

This fictional pacing model connects monthly budget, spend, attributed sales, total revenue and projected variance to an actionable agency follow-up.

	A	B	C	D	E	F	G	H
1	**Advertising budget and efficiency**							
2	FICTIONAL DEMO | Same reporting window throughout. Attributed ad sales and total revenue must use compatible definitions.							
3	Days in month	30	Days elapsed	15				
4								
5	**Channel**	**Monthly budget**	**MTD spend**	**Ad-attributed sales**	**Total revenue**	**Projected spend**	**Budget variance**	**Daily budget left**
6	Amazon	$6,000.00	$3,600.00	$14,400.00	$24,000.00	$7,200.00	$1,200.00	$160.00
7	Walmart	$2,400.00	$960.00	$4,800.00	$9,000.00	$1,920.00	($480.00)	$96.00
8	Shopify	$1,800.00	$990.00	$3,300.00	$6,000.00	$1,980.00	$180.00	$54.00
9								
10	**TOTAL**	**$10,200.00**	**$5,550.00**	**$22,500.00**	**$39,000.00**	**$11,100.00**	**$900.00**	**$310.00**
11								
12								
13	**Channel**	**ACOS**	**ROAS**	**Spend / total revenue**				
14	Amazon	25.0%	4.00x	15.0%				
15	Walmart	20.0%	5.00x	10.7%				
16	Shopify	30.0%	3.33x	16.5%				
17								
18	BLENDED	24.7%	4.05x	14.2%				
19								
20	Example action: Amazon projects $1,200 over budget. Discuss pacing with the agency; $160/day fits the remaining allocation. Review inventory and margin before reallocating.							
21								
22	Method: projection assumes current daily spend continues. Positive variance = over budget. Blended ratios use sums, not average percentages. Blank ratios mean no denominator.							

Example decision: Amazon has spent $3,600 halfway through a $6,000 month. At the current pace, spend projects to $7,200. The remaining approved allocation supports about $160/day. Before changing spend, review inventory and margin, then confirm the intended pacing plan with the agency.

Method note: projections are run-rate estimates. Blended ratios should use aggregate spend and sales rather than averaging channel percentages, and attribution definitions should be compatible before metrics are combined.

Skills: Budget pacing | Agency communication | ACOS / ROAS | Commercial judgment | Inventory-aware media coordination

07 / COMPETITIVE ASIN AUDIT

Normalize first. Diagnose second.

A public-listing audit compares two similar party-supply ASINs without pretending the PDP alone proves why one sells better.

	A	B	C	D
1	**Competitive ASIN Audit - Party Supply Bundles**			
2	*Recreated September 2026 public-listing case study | Product identifiers sanitized for a public portfolio*			
3				
4	**Metric**	**Party Kit A**	**Party Kit B**	**Interpretation**
5	Bundle pieces	106	67	The bundles are not identical in size.
6	Guests served	24	16	Normalize price by guest count before judging value.
7	Price	$68.48	$29.99	The larger kit costs more, but bundle size does not explain the full gap.
8	Price per guest	$2.85	$1.87	Normalized value comparison.
9	Price per piece	$0.65	$0.45	Secondary normalized value check.
10	Star rating	4.8	4.8	Rating alone does not explain the gap.
11	Ratings / reviews snapshot	22	70	Party Kit B has substantially more accumulated feedback.
12	Shopper-facing recent signal	50+ viewed in past month	200+ bought in past month	Different metrics, so do not compare mathematically; the second is a stronger purchase-volume signal.
13	Party Packs BSR	10539	1290	Lower is better; supports stronger recent sales velocity for Party Kit B.
14	Home & Kitchen BSR	947281	153888	Supporting signal only; rank changes over time.
15	Main image	Soft / visually pixelated presentation	Sharper; contents easier to distinguish	Main-image clarity may affect search click-through and PDP confidence.
16	Structured-data issue	Number of Items = 1 despite a 106-piece kit	Material = Latex despite paper/plastic contents	Both listings have catalog-cleanup opportunities.
17	Variation family	Serves 16; Serves 16 + Balloons; Serves 24	No comparable family noted in the audit	Review child-option pricing and conversion so the 24-person premium is easy to understand.
18	Featured Offer check	No featured offer observed in public crawl	No featured offer observed in public crawl	Verify simultaneously with the same ZIP code before treating offer status as a differentiator.

- **Normalize the offer:** one bundle serves 24 guests / 106 pieces; the other serves 16 / 67 pieces. Price per guest is therefore more meaningful than sticker price alone.
- **Value gap:** at the reviewed prices, the larger kit was about $2.85 per guest versus $1.87 - roughly a 52% premium even after accounting for bundle size.
- **Merchandising signals:** main-image clarity, review volume, recent-activity badges and category rank all create shopper context, but they are supporting evidence rather than proof of causation.
- **Catalog structure:** structured attributes and variation-family pricing can affect both shopper clarity and browse/filter quality.
- **Confirm with internal data:** compare impressions, sessions, CTR, unit-session %, Featured Offer %, advertising traffic and conversion by child ASIN before making broad changes.

The point of the audit is not to guess a single cause. It is to turn public PDP observations into a prioritized Seller Central investigation.

Skills: Competitive analysis | Amazon merchandising | Value normalization | PDP audit | Variations | Structured attributes | Traffic-vs.-conversion diagnosis

PORTFOLIO MAP

What the full folder contains

#	Project	Focus
01	DigitalOpsDesk FBA Restock Planner	Independent inventory/replenishment system + documentation
02	FBA Shipment Reconciliation	Expected vs. received units, discrepancies and follow-up
03	Pricing & Promotion QA	Discount validation and upload controls
04	Marketplace Performance	PPC, revenue, forecasting and traffic-vs.-conversion diagnosis
05	Profitability & Refunds	Fees, reimbursements, ad cost and profit thinking
06	Brand Analytics Trends	Awareness, consideration and branded-search trends
07	Catalog & Account Health	Suppression, remediation and preventive QA
08	Listing Optimization	Copy, images, attributes and measurement
09	Multichannel Launch & Coordination	Contractors/VAs, Amazon/Walmart/Shopify, launch gates, inventory and budget
10	Competitive ASIN Audit	Normalized value, PDP quality, variations, catalog attributes and investigation plan

CORE TOOLKIT

Amazon Seller Central & Vendor Central | Walmart | Shopify | Excel & Google Sheets | Marketplace reporting | Catalog and listing QA | Inventory planning | PPC / media coordination | SOPs and documentation | Cross-functional follow-through

Portfolio standard: public-facing examples use fictional/synthetic data, sanitized independent-project material, or clearly labeled public-listing observations. Real client exports, employer templates and NDA-protected data are intentionally excluded.

Modern productivity tools, including AI assistance, may be used for drafting, formatting or development support. I review and validate the calculations, business logic, recommendations and final presentation before use.

Corinna Helm
Ecommerce & Marketplace Operations
